ABSTRACT

Describe what your project presents within 150 words.

ResearchHub:

Academic Research Repository is a web-based platform designed to simplify the storage, management, and retrieval of academic research papers. With the rapid increase in research publications, students, researchers, and faculty often face difficulties in locating relevant papers due to scattered resources and limited search capabilities. This project provides a centralized repository where users can upload, organize, and access research papers efficiently. The system enables advanced searching using parameters such as **title, author, keywords, research domain, and publication year**, allowing users to find relevant papers quickly and accurately. It also offers filtering options, paper viewing, PDF downloads, and recommendations for related research to enhance the overall research experience. An admin module ensures secure management of users and repository content. By providing a user-friendly interface and organized digital storage, **ResearchHub** reduces the time spent searching for research materials, promotes knowledge sharing, and supports academic collaboration, making research more accessible, efficient, and productive for educational and research institutions.
